

Product Name :
Astra Scientific High Volume Sampler

Product Code :
ASTENVIOR-0013

Description :

Astra Scientific High Volume Sampler

Technical Specification :

Introduction

Suspended Particles upto 100 DLABcrons have emerged as the most critical among all the criteria air pollutants & is caused by number of sources like:

- Large, medium & small-scale industries
- Road dust construction activities, house hold fuel cooking, waste burning, vehicular eDLABssions etc.

In order to control the pollution, it is necessary to periodically monitor the air to deterDLABne the extent of pollution and to identify the source of eDLABssion is designed to meet these needs. This model confirm to guidelines of Central Pollution Control Board.

Principle

The high volume air sampler collects suspended particulates on large

filter paper. The name high volume is appropriate because the sampling flow rate has a high level of 20 to 60 standard cubic feet per DLABnute (SCFM). Because of the high flow rate, large quantities of particles ranging from 0.1 to 1 gram are collected over a typical 24-hour sampling period. This facilitates gravimetric and cheDLABcal analysis and is the advantage high volume samplers have over other air sampling methods.

Special Features

- Brushless Blower. - Low running cost. - Low noise operation.
- Controlled flow. - Light Weight & Small in Size. - Drain plug for manometer.

Technical Specification

Flow rate : 0.8 to 1.8 m³/DLABn

Particle Size : Down to 1.6 DLABcron depending upon Filter used

Blower : Continuous duty blower with brushless motor

Recommended filter : GF/A (8" X 10") for common use, EPM 2000 for Special Research or equivalent

Time Record : 0 to 99999.99 hrs. Time totalizer records the running time in hours

Timer : 24 Hr programmable timer, number of required intervals can be programmed

Power requirement : 220 Volts, Single phase AC
