

**Product Name :**  
Astra Handheld Particle Counters

**Product Code :**  
ASTRALAB-SUPPLYA17008

**Description :**

Astra Handheld Particle Counters

**Technical Specification :**

The instrument adopts button-type one-key measurement, and high-quality spectral data can be obtained in a few seconds.

The instrument has a cable-free handheld system design, which can provide high-precision, full-band NIR spectrum measurement. The instrument adopts button-type one-key measurement, and high-quality spectral

data can be obtained in a few seconds. Optimized the spectral data collection process, more portable, simpler to operate, waterproof (but should be moisture-proof as much as possible), built-in whiteboard reference and wavelength calibration, to ensure that the instrument can be used when it is turned on. It is an ideal tool for establishing a spectral library to support image classification management and material quantitative analysis.

Full band (350-2500nm)

Ultra-portable handheld design, light and strong

Fast and accurate spectrum acquisition

No cables, no need to connect to a computer to use

Integrated computer and LCD display

Built-in whiteboard reference and wavelength calibration, ready to use

With GPS and recording function, real-time recording of measurement location and voice notes

Equipped with sample holder for scanning thin and light samples
