

Product Name :
Thermal Conductor

Product Code :
ASTRALAB-SUPPLYA139007

Description :

Thermal Conductor

Technical Specification :

The apparatus is designed to determine thermal conductivity of different liquids.

The apparatus consists of a heater. The heater heats a thin layer of liquid.

A cooling plate removes heat through liquid layer, ensuring unidirectional heat flow.

Temperature is measured across the liquid layer and complete assembly is properly insulated.

A proper arrangement for changing the liquids is provided. The whole assembly is kept in a chamber.
