Product Name :	**Product Code :**
General Digitized Training System	CIR-LABAST-006

Description :

General Digitized Training System, We are manufacturer, supplier, exporter and solution provider in quality General Digitized Training System

Technical Specification :

General Digitized Training System The is a basic digital logic circuit training system. It includes combinational logic
and sequential logic experiment circuit. The course content of experiment have hardware
emulator and software simulator.
All necessary equipment for digital logic experiment such as power supply, signal generator,
indicator, measurement are installed on the main unit. Basic logic gates experiments
- Assembled logic circuits experiments
- Adder / subtractor experiments
- Decoder / encoder experiments
- Multiplexer experiments
- Basic Flip-Flop experiments
- Application of Flip-Flop experiments
- Counter experiments
- Application of digital logic Suitable for combinational logic, sequential logic experiments and designs
- Ideal tool for learning the basics of digital logic circuits
- Comprehensive power, signal supply and measurement devices for making experiments easily
- Expandable and flexible experiments with the included universal breadboard
- All supply units are equipped with overload protection for safety
- Computer interaction includes simulation software & emulation hardware
