

Product Name :
Astra Scientific Vibration of Spiral Spring Apparatus

Product Code :
Applied-Lab-0027

Description :

Astra Scientific Vibration of Spiral Spring Apparatus

Technical Specification :

This unit is designed to determine the time period of spiral spring and its frequency. Spiral spring is a type of spring which is formed by a metallic strip wound around a rod at same point.

The apparatus consists of a shaft on which the spiral spring is attached. A metallic rod, containing masses at its edges, is used to deflect the shaft. The deflection can be measured through a protector and the extent to which the spring was deflected initially can also be found.

Specifications:

- [1] Investigation of vibrations on a spiral spring-rotating mass system
- [2] Axis mounted on ball bearings
- [3] 2 levers with sliding weights
- [4] Spiral spring

[5] Integrated angle measuring scale mounted on axis

[6] Wall mounting plate made of anodised aluminium

Technical Data

Spiral spring

- stiffness: $c=238\text{Nmm}$
- cross-section: 10x1mm
- effective length: approx. 800mm
- inside radius: 10mm
- outside radius: 50mm

Weights made of stainless steel

- mass: 0.5kg
- diameter: 50mm

Levers made of stainless steel

- diameter: 8mm
- length: 154mm
- arm radius of the rotating mass: 36...150mm

Angle measuring scale

- 0...360°
- resolution: 1°

Base plate

- wxh: 200x250mm

Address: K-88, 20th Street, Annanagar, Chennai, India – 600040 **Phone:** +91-8860605265
