

Product Name :
JET MOSFET IGBT Trainer

Product Code :
LABUK-AP12LAB0027

Description :

JET MOSFET IGBT Trainer

Technical Specification :

Experiment Board for the study of the parameters and biasing methods of semiconductor devices.

It contains all the preassembled electronic components needed to construct the experiment circuit and divided into functional circuit block which can be interconnected and modified by means of supplied jumpers and connection cables.

NPN and PNP transistor : operation and fundamental equations.

Transistor static gain

Emitter collector characteristic curves JFET circuit amplifier, voltage generator and signal amplifier.

Field effect transistor JFET characteristics trans conductance curve

MOSFET: MOSFET Depletion, MOSFET

Enhancement, MOSFET and JFET
