

Product Name :
Astra Pesticide Residue Analysis

Product Code :
ASTRALAB-SUPPLYA2001

Description :

Astra Pesticide Residue Analysis

Technical Specification :

According to the principle of the international rapid test card method, we have developed the application of the pesticide residue rapid test card and the pesticide residue rapid test box to solve the problem of the field or vegetable market or the rapid test of funds is not enough to establish a testing laboratory equipped with instruments .

The analysis and detection scheme of gas chromatograph is to determine the distribution coefficient of stationary phase and mobile phase according to the different components in the chromatographic column in the GB/T 19648 series, using gas chromatograph, gas chromatograph liquid chromatograph, gas chromatograph Mass spectrometer separation for qualitative and quantitative detection of multi-component analytes is an internationally accepted analytical method. The results are very accurate, but there are also high requirements on the level of personnel and working environment. This solution is very suitable for large-scale inspection and quarantine rooms, large-scale food enterprise R&D quality control laboratories, and government supervision of scientific research institutions.
