

**Product Name :**  
Astra Heavy Metal Analysis

**Product Code :**  
ASTRALAB-SUPPLYA2002

**Description :**

Astra Heavy Metal Analysis

**Technical Specification :**

The heavy metal detector can quickly detect metal lead, arsenic, chromium, cadmium, mercury and other metals in food. The pollution of heavy metal pollutants has always been one of the important issues in food safety.

Detection channel: The instrument has no less than 12 detection channels, which can test multiple samples at the same time, and each sample is controlled by the program to work independently and will not interfere with

each other.

Display mode: high-definition (5 inches) 7-inch LCD touch screen display, humanized Chinese operation interface, intuitive and simple to read.

The printer uses 5 v serial port to print, you can choose to print manually or automatically, and quickly and automatically print the test results.

Can print: the name of the examiner, the difference in absorbance, the test time, the test tissue, the name of the sample and the determination of the result.

The light source of the instrument adopts imported light-emitting diode, which has high precision, strong stability, controllable light source, and can turn off unused light sources to reduce power consumption.

The interface adopts USB2.0 interface design, which is convenient for data storage. Realize data query, browsing, analysis, statistics, printing, etc.

The instrument is highly intelligent, and the instrument has a self-check function: it has the function of self-check and zero adjustment, and has the function of automatically detecting repeatability

It can automatically judge whether the sample is qualified, and the test result is more intuitive.

The rapid detection instrument has a database of more than 100 sample names, which can be clicked directly. And the sample name can be edited, and the sample name can be printed out directly. The sample name can be deleted or added freely. Each channel can be freely selected

Each sample is operated independently by program control, and will not interfere with each other and cause errors. Close unused channels for free.
