

Product Name :
Astra Anti Explosive Rotary Evaporator

Product Code :
ASTRALAB-SUPPLYA4008

Description :

Astra Anti Explosive Rotary Evaporator

Technical Specification :

Our company's explosion-proof rotary vacuum evaporator uses nitrogen sealed relay control, SCR non-contact switch and vacuum switch.

The whole machine adopts the international advanced EL airtight system, which can maintain a high degree of vacuum. Gas-liquid separator, no backflow.

The main and auxiliary high-efficiency double condensers of the product are easy to install, have good sealing, and the collection rate exceeds 95%.

The rotating flask of the product is connected by a nut, which is easy to install and set.

Drain valve can quickly and effectively collect solvent.

Can feed continuously, saving time (water inlet valve)

The vacuum system is equipped with a vacuum gauge, which can adjust the best vacuum degree of low boiling point materials to facilitate the experiment.

Intelligent temperature controller for water bath, which can be raised and lowered. Electric lifting can be customized according to actual needs.

Mechanical parts are made of stainless steel and aluminum die casting. The glass parts are corrosion resistant, high temperature resistant and explosion-proof. The rubber parts adopt new standard materials, which are convenient for users to replace.

Built-in transmission system, frequency conversion speed regulation, stable and reliable speed regulation.

With explosion-proof device.
