

Product Name :
Programmable Logic Controller PLC

Product Code :
ASTRALAB-SUPPLYA21032

Description :

Programmable Logic Controller PLC

Technical Specification :

Designed with the latest microprocessor and electronic circuitry, today's compact-size PLCs feature high level of reliability, performance, speed and networking. It is a self-contained trainer which consists of PLC main unit and commonly used I/O devices for simulation. It provides students with a thorough understanding of the theories and applications of programmable logic controllers. The use of PLCs in automated production lines enhances system reliability, product quality, information sharing, efficiency and flexibility and thus reduces costs. This trainer enables students to learn step by step from the fundamentals of PLC to more advanced controls used in industry.
