Astra Scientific

### Description :

CAN BUS Autotronic Training System

### Technical Specification :

The number of nodes is not limited by the protocol. The CAN BUS
Autotronic Training System is a distributed control system supported by
advanced serial bus system CAN (Controller Area Network).CAN is a
multi-master bus with an open, linear structure with one bus line and
equal nodes.  When signals and data are sent to a personal computer, the

computer monitoring system displays the current status and data of module on PC screen and turns on the warning light if something is wrong. Each module of system is an ECU or the interoperable device (node) on CAN BUS. Data transfer between modules is achieved by the micro - controllers over CAN BUS. The system can simulate the operation of fuel injection system, ignition system and exhaust gas control. Experiments include the characteristics and operation of various sensors and actuators used in automobiles.
