

Product Name : Thermal Conductor	Product Code : ASTRALAB-SUPPLYA139007
--------------------------------------------	-------------------------------------------------

Description :
Thermal Conductor
Technical Specification :
The apparatus is designed to determine thermal conductivity of different liquids.
The apparatus consists of a heater. The heater heats a thin layer of liquid.
A cooling plate removes heat through liquid layer, ensuring unidirectional heat flow.

Temperature is measured across the liquid layer and complete assembly is properly insulated.
A proper arrangement for changing the liquids is provided. The whole assembly is kept in a chamber.
